                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-!- DOMAIN: A pair of annexin repeats may form
-calcium and phospholipid (By similarity).
-!- SIMILARITY: Belongs to the annexin family.
-!- SIMILARITY: Contains 4 annexin repeats.

Regulation of biosynthesis and cellular localization of Sp32 annexins in tobacco By2 cells.";

in tobacco By2 cells.";

Plant Mol. Biol. 39:361372(1999).

-!- SIMILARITY: Belongs to the annexin family.

-!- SIMILARITY: Contains 4 annexin repeats.

This clone sequence is one of 5,000 Ceres full-length cDNAs made available to TIGR and Genbank. The following quality assessment of this set was done by comparison with known proteins: two percent are 3'-truncated; approximately two percent represent alternative splice variants, including unspliced introns and spliced exons; one percent may contain premature stop codons; five percent may have frame shifts in a coding region. A sequence is considered to be 5'-truncated if it lacks the translation initiation start (ATG). A sequence is considered to be 3'-truncated if it lacks the encoded protein. Please note that these cDNA sequences are derived from the Ws or LAer ecotypes and therefore may contain polymorphisms when compared to sequencing of the Genset carried out the library production and sequencing of the fill-length clones. Ceres, Inc. carried out the clustering of the
